***Allowable Subject Matter***

Regarding claim 1, none of the reference of record alone or in combination discloses or suggests an optical pickup driving apparatus for focusing an optical spot on a single-layer recording surface or a plurality of multi-layered recording surfaces of an optical information recording medium, comprising:

moving means of moving an objective lens for focusing said optical spot on said recording surface of said optical information recording medium in a direction of the optical axis of said optical spot; and

control means of controlling said moving means based on a voltage of a focus error signal based on reflected light from said optical spot,

wherein said control means controls said moving means so that said moving means moves said objective lens toward said recording surface, and when said control means detects that the voltage of said focus error signal has reached a first slice level voltage corresponding to displacement of predetermined magnitude from a reference potential, said moving means moves said objective lens toward said recording surface by a maximum of an upper limit of a predetermined amount of movement, and when the amount of movement of said objective lens has reached said predetermined amount of movement, said moving means moves said objective lens away from said recording surface, and

**when said control means newly detects that the voltage of said focus error signal has reached a second slice level voltage corresponding to displacement of predetermined magnitude from said reference potential before the amount of**

Art Unit: 2627

**movement of said objective lens reaches said predetermined amount of movement, said control means controls beam spot positioning so as to focus the optical spot.**

Claim 17 recites similar limitations as claim 1; and claims 3-16, 19-28 and 30-32 depend from claims 1 or 7. Accordingly, claims 1, 3-17, 19-28 and 30-32 are allowed.
